1XX: Informational

A 1XX Informational status code is a temporary status code which means that the server has received the request and is continuing the process.

A 1XX status code is purely temporary and is given while the request processing continues.

Informational Status Codes:

100 → Continue

101 → Switching Protocols

102 → Processing Request

103 → Early Hints

2XX: Successful

A 2XX Successful status code means that the request was successful and the browser has received the expected information.

This means that the request was successful and has been received, processed, and responded to.

200 → OK

201 → Created

202 → Accepted

203 → Non-Authoritative Information

204 → No Content

205 → Reset Content

206 → Partial Content

207 → Multi-Status

208 → Already Reported

226 → IM Used

3XX: Redirection

A 3XX Redirection status code means that you have been redirected and the completion of the request requires further action, not necessarily from your side.

300 → Multiple Choices

301 → Moved Permanently

302 → Found

303 → See Other

304 → Not Modified

305 → Use Proxy

306 → Switch Proxy

307 → Temporary Redirect

308 → Permanent Redirect

4XX: Client Error

A 4XX Client Error status code means that the website or the page could not be reached and either the page is unavailable or the request contains bad syntax.

We web developers hate this (most of the time)!

400 → Bad Request

401 → Unauthorized

402 → Payment Required

403 → Forbidden

404 → Not Found

405 → Method Not Allowed

406 → Not Acceptable

407 → Proxy Authentication Required

408 → Request Timeout

409 → Conflict

410 → Gone

411 → Length Required

@srikanth tekmudi

5XX: Server Error

A 5XX Server error status code means that while the request might be valid, the server could not complete the request. These kinds of errors are mostly caused due to problems internally within the server.

500 → Internal Server Error

501 → Not Implemented

502 → Bad Gateway

503 → Service Unavailable

504 → Gateway Timeout

505 → HTTP Version Not Supported

506 → Variant Also Negotiates

507 → Insufficient Storage

508 → Loop Detected

510 → Not Extended

511 → Network Authentication Required
